

## New order from China

**Bactiguard has received an initial order for coating concentrate from Well Lead Medical (Well Lead) in China. The order will be delivered promptly and generate license revenues in the fourth quarter 2020 of approximately SEK 9 million.**

In parallel with the marketing and sales of Bactiguard's BIP Foley urinary catheters in the Chinese market, Well Lead has made progress in the development of its own portfolio of medical devices, with Bactiguard's coating for infection prevention. Well Lead has now placed an initial order for Bactiguard coating concentrate that will be used in product development and for manufacturing of products, pending regulatory product approval.

"I am pleased that we are making progress in our collaboration with Well Lead, despite the ongoing pandemic. Preparations for local production have now entered a phase where Well Lead needs Bactiguard's coating concentrate. This also means that we, over time, are developing the partnership to include more products for infection prevention," says Cecilia Edström, CEO.

In June 2018, Bactiguard signed a combined distribution and license agreement with Well Lead, China's leading manufacturer of consumable medical devices. Initially, Well Lead has the exclusive right to market and sell Bactiguard's urinary catheters (BIP Foley) in China. At the same time, the process of obtaining regulatory product approval for locally produced central venous catheters and endotracheal tubes, with Bactiguard's technology for infection prevention was initiated.

**About Bactiguard**

Bactiguard is a Swedish medical device company with a mission to save lives. To achieve this mission, we develop and supply infection prevention solutions which reduce the risk of healthcare associated infections and the use of antibiotics. This way, we save significant costs for healthcare and the society at large.

The Bactiguard technology prevents bacterial adhesion and biofilm formation on medical devices.

Bactiguard offers the technology through licence agreements and our BIP (Bactiguard Infection Protection) portfolio of products. Through our licence partner BD, urinary catheters with Bactiguard's coating are market leading in the USA and Japan. Bactiguard's own product portfolio of urinary catheters, endotracheal tubes and central venous catheters prevent some of the most common infections, which appear in the urinary tract, the blood stream and the respiratory tract.

Bactiguard is in a strong expansion phase in the European markets, China, India and the Middle East as well by establishing license agreements in new therapeutic areas. In 2020, Bactiguard completed the acquisition of Malaysian Vigilenz, a manufacturer and supplier of medical devices and consumables, primarily within wound care and infection prevention.

Following the acquisition, Bactiguard has about 180 employees around the world. Its headquarters and one of three production facilities are located in Stockholm, the other two in Malaysia.

Bactiguard is listed on Nasdaq Stockholm.
